

## ActiveX Control for the Meteor Plus and Satellite Caller ID Devices

### Features

#### ActiveCID will

ActiveCID is an ActiveX control designed for **Meteor Plus** and **Satellite** caller ID devices. Using ActiveCID you can quickly add the CTI (Computer Telephony Integration) features of the Meteor Plus and Satellite to any application.

- Give you the full BT and Cable **Caller ID** Message
- Track the progress of incoming and outgoing calls in real time - the phone number, when the call was started or was answered and when the call ended
- Give you digits pressed during a conversation in real time
- Allow incoming and outgoing calls to be recorded (Meteor only)

### Easy to Use

```
sTemp = sTemp + "(Message waiting), "  
Select  
ActiveCID1.CallType=  
mp = sTemp + "Date @ CidMessageWaiting 1.Date  
mp = sTemp + "Line @ CidRingBack 1.Call  
ect Case ActiveCID @ CidVoiceCall  
e CidUnavailable  
sTemp = sTemp + "Calling name unavailable, "  
e CidWithheld
```

After installing ActiveCID by inserting the CD, add it to the toolbox in your IDE. Once ActiveCID is available in your project add it to your form, window or class and begin coding.

ActiveCID includes the features that you would expect from an ActiveX control (Property page, Auto List Members etc.). ActiveCID is supplied with a User Guide and a sample project for Visual Basic - **copy and paste into your own application to get immediate results!**

### Buy With Confidence

ActiveCID has been on the market since 1998 and has been used in numerous applications in the UK, mainland Europe, Dubai, USA and Canada.

We provide comprehensive email and telephone technical support. We also offer consultancy and can help you develop CTI features in your applications if required.
